ENTERPRISE DIAGNOSTIC · TECHNOLOGY EXPENSE MANAGEMENT

TEM Scope Readiness Check

A structured self-assessment for evaluating whether your current TEM scope matches the recurring services, ownership, and governance demands of your environment.

TELLENNIUM
Enterprise Expense Management

Use this executive diagnostic to assess whether your current technology expense management approach reflects the real scope of recurring services across your environment. Review each question candidly against your current state — not your intended state.

ASSESSMENT DIMENSIONS

#	Dimension	Assessment Question	Yes	Partial	No
1	Scope Fit	Does your current TEM approach reflect the full range of recurring services your organization depends on today, not just traditional telecom?	☐	☐	☐
2	Category Coverage	Are telecom, mobility, SaaS/subscriptions, and cloud-related recurring spend all clearly addressed within your management scope?	☐	☐	☐
3	Ownership Clarity	Is there clear ownership for recurring service oversight across IT, finance, procurement, and operational stakeholders?	☐	☐	☐
4	Inventory Visibility	Do you maintain a current, trustworthy inventory of active recurring services and vendors?	☐	☐	☐
5	Renewal Discipline	Do you have enough visibility into renewal dates and decision points to review services before they roll forward?	☐	☐	☐
6	Contract Alignment	Can your team connect billed services and recurring charges back to current contracts, terms, and business needs?	☐	☐	☐
7	Governance Consistency	Do you have a repeatable process for reviewing usage, spend, ownership, and service fit over time?	☐	☐	☐
8	Blind Spot Risk	Can you confidently identify recurring services or vendor categories that may sit outside your current TEM boundary?	☐	☐	☐
9	Savings Durability	Are savings sustained through ongoing management discipline, rather than found only through one-time reviews?	☐	☐	☐
10	Executive Confidence	Could your team confidently explain whether your current TEM scope is too narrow, appropriately defined, or in need of review?	☐	☐	☐

SCORING GUIDANCE

MOSTLY YES

Your organization likely has a solid foundation for modern TEM scope and governance. Focus on maintaining discipline as services, vendors, and ownership evolve.

MOSTLY PARTIAL

Some core elements are in place, but important gaps may be leaving recurring spend outside effective oversight. Prioritize category coverage, renewal visibility, and inventory trust.

MOSTLY NO

Your current TEM boundary is likely too narrow for the environment you are managing. A structured scope review may help identify where recurring costs, contracts, and service decisions need better oversight.

TEM Scope Readiness Check

A structured self-assessment for evaluating whether your current TEM scope matches the recurring services, ownership, and governance demands of your environment.

FIVE WARNING SIGNS YOUR TEM SCOPE MAY BE TOO NARROW

- → TEM is still treated mainly as telecom bill review.
- → SaaS, cloud, or mobility costs sit outside the management process.
- → Different teams manage recurring services without shared visibility.
- → Renewals move forward without enough inventory or usage review.
- → Leadership wants more cost control, but current oversight stops at invoices.

If these results raise concerns, the next step is usually a structured review of current service categories, ownership, inventory, renewals, and governance against how the business actually operates today. Scope alignment is not a one-time decision — it requires periodic reassessment as the environment evolves.
